

# Andrew Balacy

Norridge, IL | abalacy@gmail.com | 773-827-4750 | [LinkedIn](#) | [GitHub](#)

## EDUCATION

**University of Illinois Chicago** | M.S. Health Informatics, Health Data Science Concentration

**In Progress**

**University of Illinois Chicago** | B.S. Kinesiology

**December 2024**

## PROJECTS

### **Slate. — Adaptive Execution Intelligence Platform**

2026 – Present

*Independent Systems Design Project | React, Next.js, TypeScript, Tailwind CSS, Git/GitHub, Claude Code |*

[github.com/andrewbalacy/slate](https://github.com/andrewbalacy/slate)

- Identified a gap through problem discovery and systems thinking: existing productivity tools track tasks but do not model actual execution capacity. Translated this operational insight into a working GenAI-powered decision-support platform shipped in under 24 hours, then iterated through multiple versioned releases using a structured Git-based workflow and roadmap-driven feature delivery.
- Designed the system architecture from scratch: a multi-module dashboard spanning recovery intelligence scoring, a capacity-based recommendation engine, behavioral logging, and trend analytics, built on 20+ reusable React components with TypeScript throughout. Prioritized maintainability through feature-based architecture, shared business logic, and documented engineering decisions across ARCHITECTURE.md, DECISIONS.md, and TODO.md.
- Evaluated LLM output quality against real user behavior: made a deliberate product decision to eliminate emotionally-framed outputs after observing they shifted user focus away from action; redesigned the recommendation engine around analytical, capacity-based outputs and documented this as a core design principle in DECISIONS.md, using Claude Code and ChatGPT as development partners throughout while keeping all product decisions human-driven.

### **OrthoIntake — FHIR-Powered Clinical Intake Dashboard**

2026 – Present

*Independent Health IT Prototype | Next.js, TypeScript, Tailwind CSS, FHIR R4, Git/GitHub, Claude Code |*

[github.com/andrewbalacy/ortho-intake](https://github.com/andrewbalacy/ortho-intake)

- Built a clinical intake dashboard consuming live FHIR R4 resources (Patient, Condition, AllergyIntolerance, Encounter) from a public healthcare interoperability sandbox, translating 5+ years of orthopedic walk-in clinic experience into a working interoperability-standard application with a rules-based relevance engine that surfaces clinically significant history at the point of intake.
- Diagnosed and resolved a data-integrity bug by refactoring divergent query logic into a single shared source of truth for encounter ordering.

### **Advisor Brief — LLM-Powered Advisor Workflow Prototype**

2026 – Present

*Python, Anthropic SDK, Claude API | [github.com/andrewbalacy/advisor-brief](https://github.com/andrewbalacy/advisor-brief)*

- Prototyped an agentic LLM workflow for professional pre-meeting preparation using the Anthropic Python SDK, generating structured talking points and context-aware follow-up questions from client profile data via the Claude API; a feasibility experiment in GenAI-assisted knowledge work with modular prompt design.

## EXPERIENCE

### **Illinois Bone & Joint Institute (IBJI)**

February 2025 – Present

*Medical Assistant, OrthoAccess Walk-In Clinic*

*Morton Grove, IL*

- Embedded daily in a 35-40 patient/day orthopedic clinical setting, developing firsthand expertise in care coordination workflows, Epic EHR documentation patterns, and the operational friction points where AI-assisted solutions could deliver measurable clinical value.
- Conducted an independent clinical workflow analysis using process mapping and root cause analysis -- translating vague operational challenges into a structured findings report with prioritized recommendations; presented directly to supervising clinical staff, demonstrating the ability to bridge clinical and technical perspectives.

## SKILLS

- **EHR & Clinical Systems:** Epic (Documentation, Order Entry, Imaging Coordination, Workflow Optimization, Training)
- **Programming & Development:** Python, TypeScript, JavaScript, React, Next.js, HTML, CSS, Tailwind CSS, Git, GitHub
- **Data & Analytics:** Microsoft Excel (Pivot Tables, Reporting, Data Analysis), Data Visualization
- **Analytical Methods:** Process Mapping, Root Cause Analysis, Workflow Analysis, Gap Analysis, Requirements Documentation, Systems Thinking
- **AI & Automation:** Claude Code, Claude (Agents, Prompt Design, Workflow Automation), GPT, LLM Tool Integration, AI-Assisted Development, Prompt Engineering
- **Certifications:** Claude Code in Action, AI Fluency, Claude 101, Claude Code 101 (CodePath, June 2026)
